

Week	Planned Work
Week1	Select the project, research similar games, identify required software and tools, plan game features and prepare the 10 weeks project plan.
Week2	Create the basic game window (GUI) with the game title, background, and Start button.
Week3	Add a balloon and implement its movement on the screen.
Week4	Add mouse-click detection to pop the balloon and basic gameplay.
Week5	Add multiple balloons with random positions and movement speeds.
Week6	Implement the scoring system and display the player's score.
Week7	Add a game timer, Game Over screen, and different balloon types with different point values.
Week8	Add a lives system and increase the game's difficulty by adjusting balloon speed and quantity.
Week9	Add Start, Pause, Restart, and Exit buttons. Improve the UI(user interface).
Week10	Test the game, fix bugs, optimize performance, and prepare the final version for presentation and GitHub submission.
