

Balloon Pop Game

Project Title

Balloon Pop Game

Project Introduction

The Balloon Pop Game is a Java Swing-based GUI game where players pop moving balloons by clicking on them to earn points. The game is designed to provide entertainment while demonstrating programming concepts such as GUI development, event handling, animation, and object-oriented programming.

Objectives

- 1.To develop an interactive game using Java.
- 2.To learn Java Swing GUI development.
- 3.To implement scoring, timers, and event handling.
- 4.To improve programming and problem-solving skills.

Research

During Week 1, similar balloon popping games were studied to understand their gameplay and features. Common features include moving balloons, mouse-click interaction, scoring systems, timers, multiple balloon types, and increasing difficulty levels.

Required Software and Tools

- 1.Java Development Kit (JDK)
- 2.Apache NetBeans IDE
- 3.Java Swing
- 4.GitHub

Planned Game Features

- 1.Start button

- 2.Moving balloons
- 3.Balloon popping by mouse click
- 4.Score display
- 5.Game timer
- 6.Lives system
- 7.Different balloon types
- 8.Pause button
- 9.Restart button
- 10.Exit button
- 11.Game Over screen

Week 1 Activities Completed

Selected the project topic.

Researched similar games.

Identified required software and tools.

Planned the game features.

Prepared the 10-week development plan.

Conclusion

Week 1 focused on planning and preparation. The project concept, objectives, tools, and development schedule were finalized, providing a strong foundation for development in the following weeks.
